

visual experimentation.

by Manon Regnault

ARTISTIC VISION OF THE PROJECT

This project is an opportunity to put my images, my photos, my universe into motion. It won't be a game like we're used to, but a way of immersing the user in a universe that's different from his or her own, but in which he or she can join in. The user is accompanied by a path that I have created. This path will be illustrated by different states that will make new moving images appear in my canvas. The mouse won't be illustrated by an arrow cursor as we're used to seeing. In fact, it will be illustrated by a moving text that moves with us while gradually disappearing. Only when the mouse is inactive can the text be read clearly.

PLAN

state 1

'ENTER MY UNIVERSE'

state 2

- Vintage images are falling at the top of the screen
- the mouse is displaying a text that fade away when you are moving the mouse on the screen
- you could see a «next» button on the right on the screen = clik on it

state 3

2 images are moving in 2 differents direction. When you click on one image, it moves towards the second. There is an other next button on the right. Click on it

state 4

there is a photo collage of all my pngs. clik on me (who holds the camera).

state 4

'THE END'

(maybe add a music sound)

challenges

This project may seem a little challenging, but as my understanding of the programming system is still complex, I'll try my best to make the images interact with each other (state 2).

I'd also like to manipulate the sound to make the user experience even more immersive. In addition, if all goes well, I'll be adding a state to accompany the user towards a cam and riso experience borrowed from the p5js riso library.

It will also be fun to manipulate a mouse that displays text and fades it away at the same time.

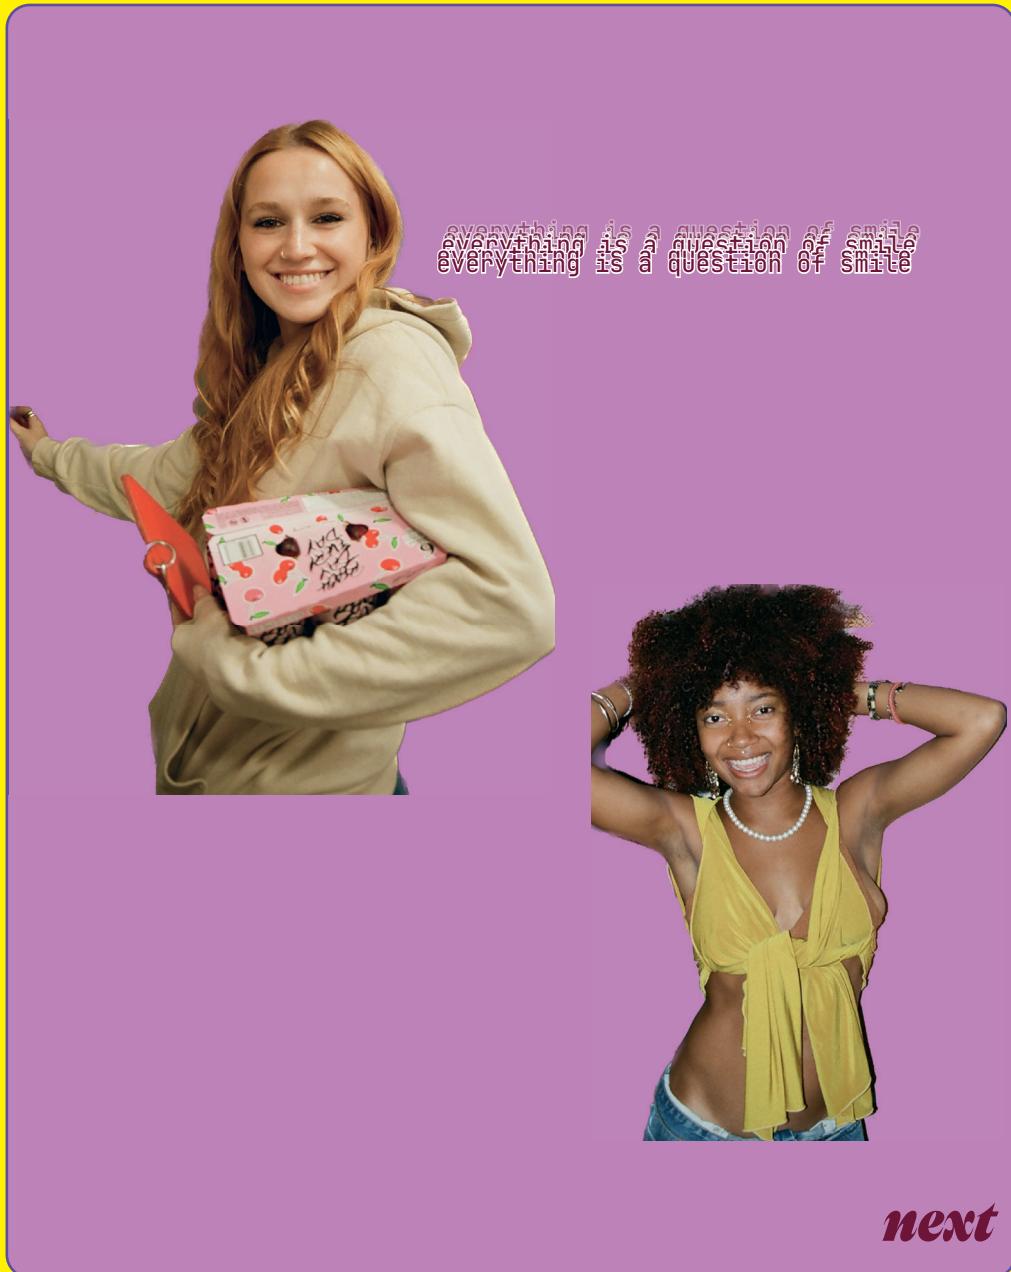

welcome to my universe

not everything is black and white
not everything is black and white
not everything is black and white

not everything is black and white
